SKILLS

Skills: C/C++, Blueprints, Unreal Engine, Unreal Editor for Fortnite (UEFN), Gameplay Programming, Gameplay Prototyping, game development, Object-Oriented Programming (OOP), Data Structures & Algorithms, Git

PROJECTS

Welcome Stranger (Solo Unreal Engine Project)

January 2026 - Present

Chicago, IL, USA

- Designed and prototyped core gameplay mechanics and levels in Unreal Engine using Blueprints, rapidly evaluating concepts and technical feasibility.
- Implemented and maintained gameplay features in Blueprints while integrating 3D assets, animations, and UI into the Unreal game development pipeline.
- Configured gameplay scenes with lighting, materials, physics, and integrated assets to support gameplay interactions and level development.

Agent 067 (Island Code: 7540-2367-0251)

August 2026 - August 2026

Chicago, IL, USA

- Developed and published Agent 067, a third-person action game in Unreal Editor for Fortnite (UEFN), featuring three combat-focused levels, enemy encounters, boss fights, weapon progression, and healing systems.
- Designed and implemented gameplay progression, combat encounters, item placement, and level flow, applying game development and problem-solving skills to create increasing difficulty and guide players through the mission.
- Tested and iterated on gameplay balance, enemy placement, progression, and player experience; debugged issues throughout development before publishing the island.

Vending Machine Software System (Course: Software Systems Architecture)

January 2025 - May 2025

Chicago, IL, USA

- Designed a Java-based MDA-EFSM architecture with two variants and separate data stores, applying modular object-oriented design.
- Implemented State, Strategy, and Abstract Factory patterns and validated system behavior through UML diagrams and end-to-end scenarios.

WORK EXPERIENCE

QQ Studio

February 2026 - Present

Game Developer Intern

Remote

- Developed a playable web-based game prototype with HTML, CSS, and JavaScript, applying game development and problem-solving skills to accelerate implementation, debugging, UI iteration, and asset integration with Codex and Claude Code.
- Debugged gameplay behavior and iterated on mechanics through testing and feedback during development.

Aubot

October 2025 - December 2025

Software Engineer Intern

Remote

- Tested and debugged 1,000+ C/C++ exercises to uncover bugs, validate expected outputs, and strengthen edge-case coverage.
- Improved solution quality by refining reference answers and technical explanations for pointers, memory management, and stacks, making complex concepts clearer for learners.
- Collaborated with a 4–6-person remote team to resolve quality issues, align validation standards, and ensure consistent results.

Institute for Information Industry (III)

October 2023 - November 2023

Assistant Engineer

Taiwan

- Validated road and test data for AI-based smart-driving development, applying structured problem-solving to improve data accuracy and support reliable system testing.
- Supported 10+ equipment tests across 2 vendors, strengthening quality assurance through defect tracking, test-process coordination, and clear technical communication.
- Partnered with a senior engineer and 2 client teams to translate technical needs into testing plans, validation workflows, and software support tools, demonstrating effective communication skills.

EDUCATION

Illinois Institute of Technology

January 2024 - December 2025

Master's, Computer Science

GPA: 3.55

FO GUANG UNIVERSITY

September 2019 - June 2023

Information Systems and Intelligent Application Program

GPA: 3.8
