EDUCATION

Illinois Institute of Technology Master's, Computer Science	January 2024 - December 2025 GPA: 3.55
FO GUANG UNIVERSITY Bachelor of Science (BS), Information Systems and Intelligent Application Program	September 2019 - June 2023 GPA: 3.8

SKILLS

Skills: C/C++, SQL, MySQL, Object-Oriented Programming (OOP), Data Structures & Algorithms, SDLC, Agile, SCRUM, Waterfall, System Architecture, Software Project Management, Git, PowerPoint/Keynote/Slides, Project Management, Java, UML, Python, Unreal Engine, game design, game development

PROFESSIONAL EXPERIENCE

QQ Studio Game Developer Intern	February 2026 - Present Remote
- Designed core gameplay mechanics and levels in Unreal Editor, rapidly prototyping concepts and feasibility with Blueprints. - Developed and maintained gameplay features and AI using Blueprints; integrated 3D assets, animations, and UI into the Unreal pipeline. - Assisted with scene setup (lighting, materials, physics) and collaborated closely with the technical supervisor on game concept development. - Developed a web-based playable game prototype with HTML, CSS, and JavaScript, using Codex and Claude Code to accelerate implementation, debugging, UI iteration, and asset integration.	
Aubot Software Engineer Intern	October 2025 - December 2025 Remote
- Tested and debugged 1,000+ C/C++ exercises to uncover bugs, validate expected outputs, and strengthen edge-case coverage. - Improved solution quality by refining reference answers and technical explanations for topics such as pointers, memory management, and stacks. - Partnered with a 4–6 person remote team to align validation standards, resolve quality issues, and ensure a consistent user experience.	
KINN Thai Software Engineer Intern	July 2025 - December 2025 Remote
- Developed an online reservation page using SimplyBook.me, translating business requirements into booking flows, policies, and user-facing settings. - Tested core workflows, edge cases, and end-to-end functionality to identify issues and ensure reliable performance before launch. - Created step-by-step documentation and trained the owner on daily operations to support smooth adoption and reduce user error.	
Institute for Information Industry (III) Assistant Engineer	October 2023 - November 2023 Taiwan
- Validated road and test data used in AI-based smart driving development to improve data accuracy and support system testing. - Assisted with 10+ equipment tests across 2 vendors, contributing to quality assurance, defect tracking, and test process coordination. - Worked with a senior engineer and 2 client teams to turn technical needs into testing plans, validation workflows, and software support tools.	
Smart Healthcare Tech Software Engineer Intern	July 2022 - August 2022 Taiwan
- Designed a SQL/MySQL database schema and integrated 4–6 web pages with the database. - Partnered with supervisors to write 4–6 product specs, clarifying requirements and acceptance criteria.	

PROJECTS & OUTSIDE EXPERIENCE

Vending Machine Software System (Course: Software Systems Architecture)	January 2025 - May 2025 Chicago, IL, USA
- Designed a Java-based MDA-EFSM vending machine architecture with 2 variants and separate data stores per variant. - Applied 3 OOP design patterns (State, Strategy, Abstract Factory) in Java to keep behavior modular and extensible. - Documented and validated whole system behavior using 2 UML diagram types (class and sequence), and 2 end-to-end example scenarios.	
Healthcare Management System (Course: Database Organization)	January 2024 - May 2024 Chicago, IL, USA
- Designed a relational HMS with 7 entities/tables and 6 key relationships (e.g., Doctor–Patient, Patient–Invoice, Invoice–Payment). - Implemented MySQL + a Python CLI for CRUD/analytics, using 2 indexes, 2 views, 3 triggers, 2 stored procedures, and 2 SQL functions; validated with 5 CLI test cases.	
Iowa's First Congressional District (Course: Online Social Network Analysis)	September 2024 - December 2024 Chicago, IL, USA
- Built a pipeline using Census API (REST) + historical data to predict 3 targets (turnout %, presidential winner, House winner). - Matched 3 similar districts (IA/MO/IL) and generated maps for 4 cycles (2008–2020). - Trained Random Forest + TensorFlow/Keras; got 2/2 winner correctly and 69.52% vs 72.77% turnout.	
Design & Implementation of AutoML for Accelerating Medical Diagnosis Support System Development	January 2022 - December 2022 Taiwan
- Built a Python AutoML pipeline for medical diagnosis support, training and evaluating 5 algorithms (SVM, ANN, LR, RF, Naïve Bayes) and optimizing performance via testing/debugging. - Received the College Student Research Scholarship from Taiwan's National Science and Technology Council in 2022.	
AI Agent Generated Project Management Plan for an Insurance App (Course: Software Project Management)	July 2025 - August 2025 Chicago, IL, USA
- Developed a project management plan for an insurance app using 2 methodologies (Waterfall and Agile), comparing trade-offs in scope and scheduling. - Prototyped AI-agent workflows using 2 agent frameworks (LangChain, AutoGen) and LLMs to support 3 functions: AI-assisted decision-making, testing/debugging, and multi-agent coordination.	
RAG-Based Movie Recommendation System	September 2025 - December 2025 Chicago, IL, USA
- Built a RAG-based movie recommendation system using Meilisearch with 2 retrieval methods (BM25 + vector search). - Implemented an LLM router to dynamically select BM25 vs. vector retrieval based on the user's query intent. - Delivered a Gradio chat UI with 3 retrieval modes (BM25/Vector/Auto) and displayed the retrieval method used per response.
